Laravel

Laravel Add a new column to existing table in a migration

```
<?php

use Illuminate\Support\Facades\Schema;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Database\Migrations\Migration;

class AddStoreIdToUsersTable extends Migration
{
/**
* Run the migrations.
*
* @return void
*/
public function up()
{
Schema::table('users', function (Blueprint $table) {

// 1. Create new column
// You probably want to make the new column nullable
$table->integer('store_id')->unsigned()->nullable()->after('password');

// 2. Create foreign key constraints
$table->foreign('store_id')->references('id')->on('stores')->onDelete('SET NULL');
});
}

/**
* Reverse the migrations.
*
* @return void
*/
public function down()
{
Schema::table('users', function (Blueprint $table) {

// 1. Drop foreign key constraints
$table->dropForeign(['store_id']);

// 2. Drop the column
$table->dropColumn('store_id');
});
}
```
